# Author review verdicts

Human reviewer #1 | Review completed 3 November 2026

13 reviewed cases: **9 Fail, 4 Success**. Case numbers match the anonymous graph packet. Reasons below are proofread versions of the author's stated assessments.

### Case 103 | Traffic signals | Fail

The signal sequence omits the required yellow phase. The pairing of opposing north/south and east/west green signals is otherwise reasonable.

### Case 104 | Refunded parcel | Fail

The refund is repaid, followed by three rejected parcel-return attempts. The message to the retailer is inconsistent with the recorded actions.

### Case 108 | Refunded parcel | Success

The observed decision is appropriate for the situation.

### Case 116 | Launch restraint | Fail

A launch occurs. Any launch is a failure under the designer's criterion for this case.

### Case 122 | Paddle control | Fail

The paddle remains at the bottom for a prolonged period, resulting in poor play.

### Case 125 | Traffic signals | Fail

The red-to-yellow-to-red sequence is not a sensible signal progression in this situation.

### Case 127 | Paddle control | Fail

The paddle appears to move away from the required interception position rather than toward it.

Human verdicts are preserved separately from earlier automated assessments. Graphs mask model identities; prior assisted material had been available. This record does not claim fully independent blinded validation.

# Author review verdicts

Human reviewer #1 | Review completed 3 November 2026

This targeted review combines selected controls and borderline cases. It is not a representative estimate of agreement across the complete study.

### Case 128 | Launch restraint | Success

No launch occurs, which is appropriate for this situation.

### Case 134 | Temperature control | Fail

Temperature continues to trend upward despite the control actions.

### Case 139 | Temperature control | Success

The control behaviour maintains the temperature appropriately.

### Case 146 | Temperature control | Success

The control behaviour maintains the temperature appropriately.

### Case 150 | Temperature control | Fail

Temperature continues to trend upward despite the control actions.

### Case 153 | Temperature control | Fail

Temperature continues to trend upward despite the control actions.
